

CATALIST — TAKE-HOME ASSIGNMENT

Thank you for progressing to the assignment stage. This is a short, time-boxed exercise designed to take about 2-3 hours.

TASK

Build a small REST endpoint that accepts a JSON payload, validates it, and returns a computed result. Include a couple of automated tests.

WHAT WE'RE LOOKING FOR

- Clear, readable code and sensible structure.
- Input validation and graceful error handling.
- A short README explaining how to run it.

SUBMISSION

Reply to the assignment email with a link to a repository (or a zip).

Please submit before the deadline stated in the email.

(This is a placeholder brief generated for local development.)
